

eOn Communications Announces Availability of WeLINKTM Conference Server

eOn Communications is pleased to announce the availability of the WeLINK Conference Server, a SIP-based conferencing application which can run stand-alone or can be loaded directly onto an existing IP Messenger Unified Communications server providing organizations with a simple consolidated solution for all their messaging, mobility, presence and conferencing needs.

The WeLINK Conference Server provides the ability to set up a meeting place for people to join in at an appointed time – a Meet-Me Conference. At the scheduled time, internal callers dial an extension number and enter the access code to join. Outside callers simply dial a predefined number and enter the access code to join. All other parties that may be in the room will hear a tone and the person's pre-recorded name indicating a new party has joined the call. Upon leaving the conference, the person's pre-recorded name will once again be played to alert others when someone leaves the conference.

At any given time, the system can support up to a maximum of 24 parties in a single conference and up to 48 channels in a single system, with the ability to configure unlimited private rooms. This means that a maximum of 48 people can simultaneously connect to the conference server. To increase the maximum number of channels, additional servers can be added along with additional channel resources from the switch.

Conferencing and meetings are the core fabric of an organization's daily agenda. Improving this core process by facilitating easy access to meetings at the lowest possible cost will not only drive productivity, but will dramatically reduce the organization's core communications and operating costs. WeLINK Conferencing Server can make a substantial and measurable contribution to an organization's bottom line!

WeLINK Conferencing Services

The following services are included with the conference server:

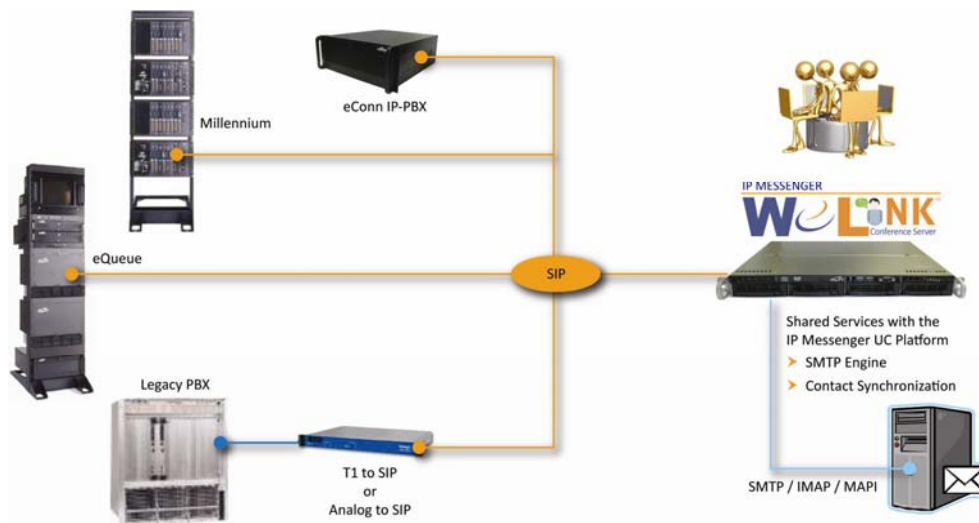

- **On-Demand Conference Calling** — Users can initiate On-Demand conference calls by inviting others to join an active call right from their handsets, mobile phones and softphones. The server will call the number and extend the invitation to the desired participant. On-Demand conference calls are limited to 24 parties total, including the conference initiator.
- **Meet Me Conference Calling** — Meet-Me Conference calls are for up to 24 participants scheduled in advance. With unlimited rooms, each user in your organization has a dedicated conference space and can simply schedule meetings. All participants are able to both hear and speak. Room owners can setup private rooms in each conference to break off the main call for quick private sessions.

- **Audio Auditorium** — Audio Auditorium mode conference calls are for larger groups of 10 to 24 participants. The key difference between this service and Meet Me conference calling is that during an Auditorium conference call, a client moderator controls which participants speak. This prevents participants from talking over each other and background noises interfering with sound quality. The client moderator controls speaking access directly over the phone — whether or not they can speak and which participants are "raising their hands." The moderator mutes and un-mutes individual participants at their discretion.
- **Recording and Logging of Meetings and Group Sessions** — WeLINK not only provides adhoc access to instant collaboration, but it can also record the whole session and provide a detailed record of what was discussed, so the information can be shared amongst participants for review. This is excellent for large group presentations and training sessions where users can listen to the meeting notes.

Platform Architecture

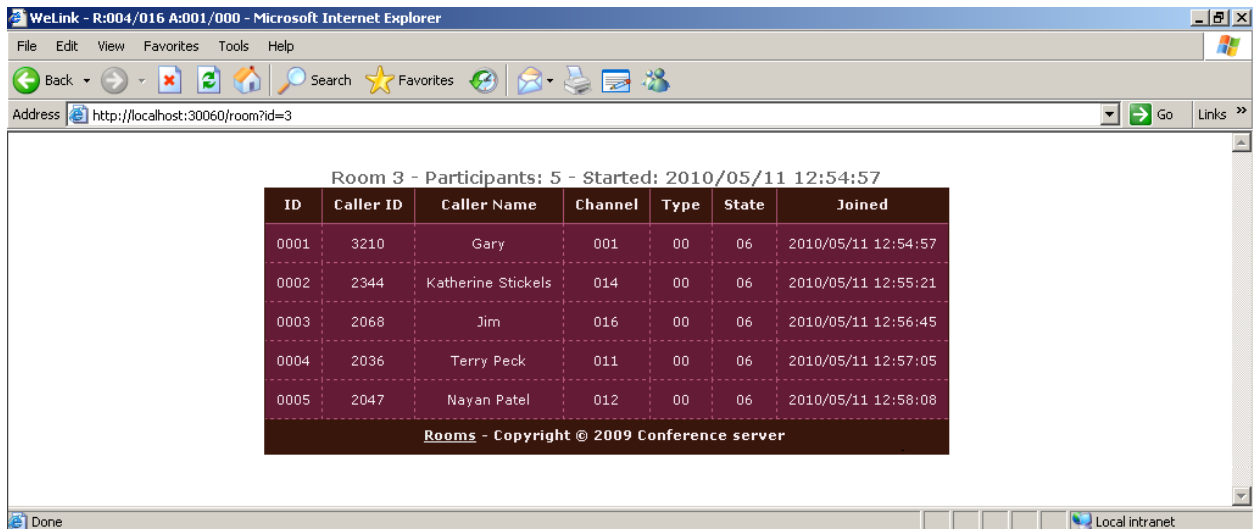

The architecture of the WeLINK platform not only allows it to work with eOn's Millennium, eQueue and the upcoming release of the eConn IP-PBX, but the pure openness of its SIP stack enables it to work with multiple phone systems with different interfaces simultaneously. This means that an organization can setup the conference service and configure it to connect to multiple locations, delivering real-time conferencing to ALL locations.

When deploying a consolidated configuration of WeLINK Conference Server with the IP Messenger platform, there are several enhanced functions available to Unified Communication users that leverage the conferencing service:

- **Rich Presence** — Users can see the status of other users and their extension to easily add them to a conference using the UC Client Manager software.
- **Contact Integration** — IP Messenger will reference the caller ID information with your contact database for proper identification of the conference participants.
- **Speaker Markers** — Markers are automatically created on a recorded file which allows you to see who was speaking at any given moment.
- **Live E-mail Reports and Meeting Notes** — UC users will instantly be notified after each conference regarding the status and details of the conference, including who participated, their phone number and duration time of speaking.
- **Conference Transcription** — Recorded conference calls can be automatically emailed to a transcription service that will convert the speech to text and send you a text script of the conversation.

WeLINK Room Monitor Screen

Note: Even though both the IP Messenger and WeLINK applications are running on the same server, they will use dedicated SIP resources and not share voice channels. This means that WeLINK will always have dedicated SIP resources, specifically for conferencing. Conference meetings will not tie-up auto attendant and voice mail channels for outside callers and users from checking messages.

WeLINK Conference Server Pricing

Part Number	Description	List Price
WeLINK Conference Server Base License		
CONF-SERV-08SW	WeLINK Conference Server – 8 Port Base Audio SIP – Initial Year S/W License	
WeLINK Add-On Ports		
CONF-SERV-08UP	WeLINK Price per additional 8 Ports	
CONF-SERV-04UP	WeLINK Price per additional 4 Ports	
CONF-SERV-01UP	WeLINK Price per additional 1 Port	
WeLINK Annual License – Required to continue service after 1st year		
SUPP-CONF-0148	WeLINK Annual Software License, 1-48 ports, price per port – non-discountable	
System License – Required to enable a WeLINK conference port on the Millennium		
500000-433-104	Millennium IP Conference Port License, price per port – non-discountable; requires Millennium software V3.12-002+	
IP Messenger License for Visual Voice Messaging		
VIVM-1000-01SW	Visual Voice Messaging (Speech to Text) – enables integration with Speech-to-Text provider PhoneTag to convert the audio of the conference call or a voice mail message to text. Customer has to setup an account directly with PhoneTag, www.phonetag.com . Corporate pricing is \$0.30 per 30 seconds of each message and \$0.04 per 6 second increments thereafter. The cost for a HIPAA compliant recorded conversation is \$1.00 per minute.	

Note: WeLINK is an annual license that expires after 12 months. Customers may simply renew their annual license to continue the Meet-Me Conferencing service. This ensures the latest updates, upgrades and optimal performance of the conferencing platform on a continual basis. 90 days prior to expiration, the WeLINK server will continually notify ALL conference room moderators of the approaching expiration date, so there is sufficient time to renew the annual service.

Product Collateral

For more information, please refer to the WeLINK brochure and presentation included with this announcement and WeLINK documentation available at http://www.eoncommunications.com/EIPM_documentation.htm.

We have product specialists available that can provide you and your customers with a live demonstration of the WeLINK Conference Server and IP Messenger Unified Communications platform. If you would like to request a Webinar, please contact your Regional Sales Manager or Katherine Stickels at kstickels@eoncc.com to schedule a date and time.

WeLINK Included with IP Messenger Demo System

The IP Messenger demo system now includes 4 ports of the WeLINK along with a 12 month conference license at no additional charge. If you have already ordered the demo system and would like to have the WeLINK Conference Server, please contact eOn Customer Service at 877-288-8823 ext. 163 and we will provide you with the WeLINK software and upgrade your IP Messenger sentinel.

Order Information

Please review the WeLINK pricing and then if you have any questions, please contact your Regional Sales Manager. To place an order or obtain a sales contact, please call Customer Service at 877-288-8823 ext. 163 or email at lschnabl@eoncc.com.
